Cystitis is a common urinary tract infection (UTI) that can affect both men and women. It is caused by bacteria that enter the urethra and travel up the urinary tract to the bladder. Cystitis can cause a number of uncomfortable symptoms, including:

- * Frequent urination
- * Burning or pain during urination
- * Urgency to urinate
- * Cloudy or foul-smelling urine
- * Pain in the lower abdomen or back

Cystitis is usually treated with antibiotics. However, there are a number of things you can do to help relieve the symptoms of cystitis and prevent it from coming back.

What is Cystitis?

Cystitis is a bacterial infection of the bladder. It is most commonly caused by the bacterium *Escherichia coli* (*E. coli*). *E. coli* is a type of bacteria that is found in the intestines. It can enter the urethra and travel up the urinary tract to the bladder, where it can cause infection.

Cystitis is more common in women than in men. This is because women have a shorter urethra than men, which makes it easier for bacteria to enter the bladder.

Symptoms of Cystitis

The most common symptom of cystitis is frequent urination. Other symptoms can include:

* Burning or pain during urination * Urgency to urinate * Cloudy or foul-smelling urine * Pain in the lower abdomen or back * Fever * Chills * Nausea * Vomiting

Causes of Cystitis

The most common cause of cystitis is bacteria that enter the urethra and travel up the urinary tract to the bladder. Other causes of cystitis can include:

* Sexual intercourse * Using a diaphragm or cervical cap for birth control * Having a catheter inserted into the urethra * Having a urinary tract obstruction * Having a weakened immune system

How to Treat Cystitis

Cystitis is usually treated with antibiotics. Antibiotics work by killing the bacteria that cause the infection. The type of antibiotic that is used will depend on the type of bacteria that is causing the infection.

In addition to antibiotics, there are a number of things you can do to help relieve the symptoms of cystitis. These include:

* Drinking plenty of fluids * Urinating frequently * Taking over-the-counter pain relievers * Applying a heating pad to your lower abdomen * Sitz baths

If you have cystitis, it is important to see a doctor to get the proper treatment. Cystitis can lead to serious complications if it is not treated properly.

Tips for Preventing Cystitis

There are a number of things you can do to help prevent cystitis. These include:

* Drinking plenty of fluids * Urinating frequently * Wiping from front to back after using the toilet * Avoiding using harsh soaps or douches * Wearing cotton underwear * Changing your underwear frequently * Avoiding sexual intercourse if you have symptoms of cystitis

Cystitis is a common UTI that can cause a number of uncomfortable symptoms. However, it is usually treated with antibiotics and there are a number of things you can do to help prevent it from coming back. If you have cystitis, it is important to see a doctor to get the proper treatment.
