Learn the secrets of card counting with professional blackjack player Priest, who has won over \$30,000 using this technique.

In this comprehensive guide, you'll discover the basics of card counting, how to use it to your advantage, and tips for increasing your winnings.

What is card counting?

Card counting is a technique used by blackjack players to keep track of the cards that have been played. This information can then be used to determine the probability of certain cards being dealt, and to make more informed betting decisions.

There are many different card counting systems, but the most popular is the Hi-Lo system. In this system, each card is assigned a value of +1, 0, or

-1. High cards (10s, Jacks, Queens, Kings, and Aces) are assigned a value of -1, while low cards (2s, 3s, 4s, 5s, and 6s) are assigned a value of +1. 7s, 8s, and 9s are assigned a value of 0.

To count cards, simply add the value of each card that is dealt. If the running count is positive, it means that there are more high cards in the deck than low cards. This is good for the player, as it increases the chances of being dealt a blackjack or a high-value hand.

If the running count is negative, it means that there are more low cards in the deck than high cards. This is bad for the player, as it decreases the chances of being dealt a blackjack or a high-value hand.

How to use card counting to your advantage

Once you know how to count cards, you can use this information to make more informed betting decisions. For example, if the running count is positive, you should bet more money because the chances of being dealt a blackjack or a high-value hand are increased.

If the running count is negative, you should bet less money because the chances of being dealt a blackjack or a high-value hand are decreased.

You can also use card counting to determine when to hit or stand. For example, if the running count is positive, you should stand on a 16 or 17 because the chances of busting are decreased.

If the running count is negative, you should hit on a 16 or 17 because the chances of busting are increased.

Tips for increasing your winnings

Here are a few tips for increasing your winnings when using card counting:

- Learn the Hi-Lo card counting system.
- Practice counting cards until you can do it quickly and accurately.
- Bet more money when the running count is positive.
- Bet less money when the running count is negative.
- Stand on a 16 or 17 when the running count is positive.
- Hit on a 16 or 17 when the running count is negative.

Card counting is a powerful technique that can help you increase your winnings at blackjack. By following the tips in this guide, you can learn how to count cards and use this information to your advantage.

So what are you waiting for? Start counting cards today and start winning more money at blackjack!
